The research population includes 38 Islamic banks, with a sample of 21 banks (11 BUS and 10 UUS) selected using purposive sampling based on the availability of complete annual reports. Data were analyzed using multiple linear regression with classic assumption tests and hypothesis testing. The results indicate: (1) The Board of Commissioners has a significant effect on financial performance, (2) The Sharia Supervisory Board has no effect on financial performance, (3) Capital Structure (measured by the Debt to Asset Ratio) has a significant effect on financial performance, and (4) The Board of Commissioners, Sharia Supervisory Board, and Capital Structure collectively influence financial performance.
